## Multi Drivers / Nut Drivers

### Select-A-Bit™ Multi-Drivers

Replaces 16 screwdrivers with extra long, industrial quality steel bits!

- Extra long (3") double-ended bits are easier to handle and keep track of than the more common shorter, smaller bits.
- All bits store safely in the handle in separate bit compartments -- the end cap allows individual bit selection and will stay closed during use, preventing stored bits from falling out.

**CLASSIC** multidriver operates like a standard, multitbit screwdriver, except it includes 16 of the most often used bits, stored right in the handle!

**SECURITY** multidriver operates just like the Classic model, but comes with a special set of security bits designed to work with security fasteners.

**RATCHET** multidriver operates with a heavy duty reversible ratchet mechanism on an adjustable nosepiece that locks into the angle you need.

**RATIO** multidriver operates using 4:1 ratio action -- with each turn of the handle, the geared nose-piece turns four times as fast! Ratcheting action is reversible -- you can change its direction with one hand, even during use.

The **CLASSIC**, **RATCHET**, and **RATIO** multidrivers all come with the same set of industrial quality, extra-long bits. The **SECURITY** multidriver comes with special security bits.

Model #	Description	Wt. (lbs.)
